

Key benefits of MicroEssentials S15

- Ensures balanced nutrition, through even distribution of nutrients
- Eliminates risk of component segregation and settling, as with traditional blends
- Delivers two forms of season-long sulfur availability: sulfate and elemental sulfur
- Increased seed safety
- Innovative granule chemistry improves nutrient uptake
- Provides convenience and ease of use as a direct application, blend or starter
- Saves bin storage space

The bottom line: MicroEssentials S15 is versatile, easy to use and improves nutrient uptake. That's the MicroEssentials difference.

S15[™]

MicroEssentials®: A breakthrough in crop nutrition.

MicroEssentials® fertilizer is a revolutionary product from The Mosaic Company that delivers nitrogen, phosphorus and sulfur in uniform granules, allowing plants to easily uptake nutrients as needed. The patented manufacturing process ensures a more uniform distribution of nutrients than a traditional blended fertilizer product can provide. So, every plant in the field gets what it needs.

MicroEssentials S15™ (13-33-0-15S) is specially formulated for use on most crops, including canola, wheat, corn, sugar beets, soybeans and alfalfa. MicroEssentials S15 delivers three nutrients vital to plant health and growth. Each nutrient is applied in a proper ratio, benefiting crops and making key nutrient interactions possible, so nutrients are more available to plants throughout the growing season.

The right ratio makes all the difference.

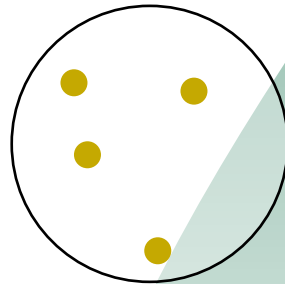

MicroEssentials S15 delivers P and S at the right ratio and the right time for developing plants. Key nutrient interactions help make the fertilizer more available to the plant and increase phosphorus uptake.

MicroEssentials delivers an optimal rate of sulfur in two forms to ensure season-long availability:

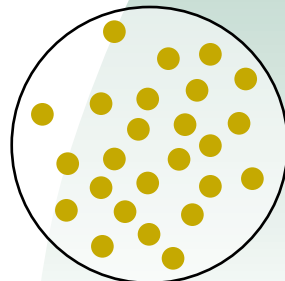

Sulfate: Available immediately to developing roots.

Elemental sulfur: Available later in the growing season, after oxidation.

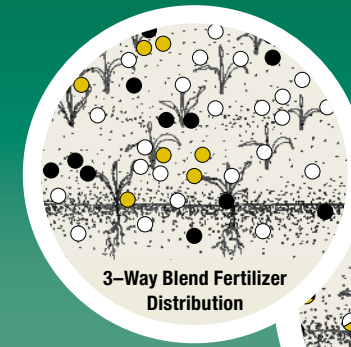

Sulfur Distribution

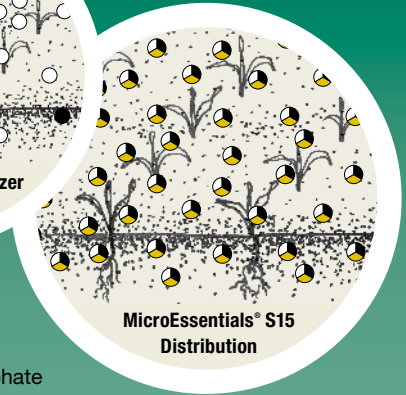

Typical Blend

MicroEssentials

3-Way Blend Fertilizer Distribution

MicroEssentials® S15 Distribution

- Ammonium Sulfate
- Elemental Sulfur
- Mono-Ammonium Phosphate

Plants start faster, stay healthier.

Plants start faster with MicroEssentials S15 because it delivers nitrogen in the ammonium form young plants need. As research has proven, young plants need nitrogen in the ammonium form for strong early-season growth, making them less susceptible to harsh weather conditions. MicroEssentials S15 can help you cultivate success, one acre at a time.
